EDUCATION

Mahindra University

B.Tech in Electronics and Computer Engineering

Hyderabad, India

Aug 2023 – Present

FIITJEE Jr. College, Miyapur

Intermediate (Class XII)

Hyderabad, India

Jun 2021 – May 2023

EXPERIENCE

IoT & Robotics Training Program

Jul 2024 – Aug 2024

TechnooK × Cognizance'24, IIT Roorkee

- Completed hands-on training in IoT sensor integration and robotics automation under IIT Roorkee's Cognizance programme.

PROJECTS

UniShip | *Next.js, React, Flutter, Firebase, Groq, TypeScript, Tailwind CSS*

2025 – Present

- Architected a full-stack university placement platform spanning a Next.js web app and a Flutter mobile app, serving three distinct user roles (students, university admins, super admins).
- Built a proctored online assessment portal with an in-browser code editor and a live invigilation dashboard, running a Dockerized code compiler on the college's HPC cluster.
- Integrated the Groq API (Llama 3.3 70B) to auto-grade test submissions and power an AI resume builder with ATS scoring and PDF export.
- Implemented three-tier role-based access control with Firebase Auth and Firestore, backed by real-time data sync.

Smart Leads Dashboard | *React, TypeScript, Node.js, Express, MongoDB, Docker, JWT*

2025

- Engineered a full-stack lead-management system with JWT authentication, bcrypt password hashing, and role-based access (Admin / Sales User).
- Added server-side search, filtering, pagination, and admin-only CSV export; containerized the stack with Docker Compose and deployed to Render.

OceanX Grocery App | *Kotlin, Java, Android Studio, XML*

2025

- Developed a native Android grocery-delivery app modeled on Blinkit, featuring a categorized product catalog and a real-time cart with live quantity updates.
- Built fast client-side search and filtering with a streamlined checkout flow, keeping the UI smooth and responsive.

Flutter Task Manager | *Flutter, Dart, Firebase Auth, Cloud Firestore, REST API*

2025

- Built a cross-platform task manager with full CRUD, real-time Firestore sync, and a motivational-quotes feed pulled from a third-party REST API.
- Applied Material 3 design, form validation, and Firestore composite indexing to keep tasks sorted and the app responsive.

AWARDS & ACHIEVEMENTS

TakeMe2Space Hackathon — Autonomous Satellite Control Developer (Lost in Space Track)

2025

- Built an autonomous Python imaging and attitude-control planner for Earth-observation satellites, using Inertial-Hold TSP and Mosaic Tiling scheduling to improve coverage and efficiency.
- Modeled accurate satellite paths with SGP4 orbital propagation inside a Basilisk simulation.

LAM Research Lab Hackathon — Semi-finalist (All-India Level)

2025

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Dart, Python, Java, Kotlin, HTML, CSS

Frontend & Mobile: React, Next.js, Tailwind CSS, Flutter

Backend & Databases: Node.js, Express.js, Firebase (Auth, Firestore, Storage), MongoDB, REST APIs

Deployment & Tools: Docker, Vercel, Render, Railway, Git/GitHub, VS Code, Android Studio

ACTIVITIES

Represented college in Football, Cricket, and Track & Field; Blue Cross volunteer.
